

Installing a module from the marketplace

The screenshot shows the LemonStand marketplace interface. At the top, there is a navigation bar with the LemonStand logo, contact information (604) 558-0555 and sales@lemonstand.com, and a 'Free Trial' button. Below the navigation bar is a blue header with the word 'Marketplace'. On the left side, there is a search bar and a sidebar menu with categories like Modules, Themes, Shipping modules, Payment modules, Marketing modules, Utility Modules, Other modules, Merchandising, and Ideas. The main content area displays the 'Minimum Order Amount' module by LemonStand. The module details include: Added: June, 29, 2011; Category: Other modules; Version: 1.0.1 - view changes; Downloads: 84; and a 'FREE Add to Account' button. The module description states: 'Requires that an order meets a minimum order amount set in the module settings. The module also provides a simple API which you can use in the Cart page (or anywhere) to prevent customer from placing orders. There are 2 API calls: MinOrderAmount::order_allowed() - checks whether the total cart amount is equal or bigger than the minimum order amount. Usage: <code><? if (MinOrderAmount::order_allowed()): ?> ... show the Check Out button here <? else: ?> ... show some message <? endif ?></code>'. Below this, it says: 'MinOrderAmount::get_min_amount() - returns the minimum order amount value which you have specified on the module configuration page. Usage: <code>The minimum order amount is<? = format_currency(MinOrderAmount::get_min_amount())?></code>'. At the bottom left, there is a message: 'Your cart is empty.'

Here we have chosen the Minimum Order Amount to demonstrate how to install a module to your LemonStand store.

So on the module's marketplace page you will want to click the Add to account button. If you aren't already logged in you will be prompted to log in.

The module has been added to your purchase list. You can bind the module to a LemonStand license from My Account page.

Free

Requires that an order meets a minimum order amount set in the module settings.

The module also provides a simple API which you can use in the Cart page (or anywhere) to prevent customer from placing orders. There are 2 API calls:

MinOrderAmount::order_allowed() - checks whether the total cart amount is equal or bigger than the minimum order amount. Usage:

```
<? if (MinOrderAmount::order_allowed()): ?>
... show the Check Out button here
<? else: ?>
... show some message
<? endif ?>
```

MinOrderAmount::get_min_amount() - returns the minimum order amount value which you have specified on the module configuration page. Usage:

```
The minimum order amount is<? = format_currency(MinOrderAmount::get_min_amount())?>
```

Once the button is clicked you will see a confirmation message telling you that it has been added to your list of purchased modules. In the navigation bar click My Account to find the module you just purchased.
