

This section will take you through the settings page in the backend of your LemonStand store.

We will guide you through most of the important settings you will want to configure to get your LemonStand Store running.

The screenshot shows the LemonStand Dashboard interface. At the top left is the LemonStand logo and the word "Dashboard". At the top right, there are links for "View Store" and the user name "Cameron Johnson" with a settings gear icon. A dark blue navigation menu is open on the left side, listing various sections: Dashboard, Reports, CMS (Pages, Layouts, Partials, Content, Resources, Themes), Testimonial (Statements), Shop (Categories, Products, Orders, Customers, Tax Classes, Shipping Options, Payment Methods, Catalog Price Rules, Discounts), Commodel (Comments, Tags), Gallery (Set Items, Settings), Blog (Posts, Categories, Settings), and System (Settings, Users, Backup or Restore, Modules & Updates). The main content area is mostly greyed out, with some text visible: "system property." and "the Shipping Configuration page and set the shipping origin location and the weight and dimension units." Below the navigation menu, there are three "previous: 0" links. The dashboard features two tables: "Top Pages" and "Recent Orders".

Page	Pageviews	% Pageviews
	<no data>	
	0	

#	Date	Total	Status
	<no data>		
View orders report			

At the bottom right of the dashboard, there is a footer with the following text: "LemonStand is a product by LemonStand eCommerce Inc. Copyright © 2012 LemonStand eCommerce Inc. All Rights Reserved. [Merchant Guide](#) | [Developer Guide](#)".

To get to the setting page, click on the down arrow to access the navigation menu. Next under System, click the settings link.

System Configuration Tips
 There are issues you need to pay attention to in order to configure the system properly.
 * Shipping parameters are not configured. Please [click here](#) to open the Shipping Configuration page and set the shipping origin location and the weight and dimension units.

CMS

- Statistics and Dashboard**
Configure Google Analytics integration or built-in statistics feature and manage the Dashboard.
- CMS Settings**
Enable or disable the file-based CMS templates and manage other CMS parameters.
- Maintenance Session: disabled**
Configure the maintenance notification page and enable the maintenance mode.

System

- Email Settings**
Configure email settings. Specify SMTP server address and authorization parameters.
- Email Templates**
Edit the email message templates that your store sends to customers and the store team members.
- HTML Editor Settings**
Configure HTML Editor buttons, menus and other features.
- Customize**
Choose color theme for the Administration Area, upload a company logo, set header and footer text.
- View Error Log**
View error log messages. Preview errors time and description.
- View Access Log**
View list of successful user logins.
- License Agreement**
View LemonStand End User License Agreement. Last updated on 12/13/2012.

eCommerce

- Currency**
Configure the store currency. Set currency formatting parameters and ISO code.
- Currency Converter**
Select and configure a currency converter used by LemonStand.
- Countries and States**
Setup a list of countries and states you cater to. Set ISO codes for countries and states.
- Shipping Configuration**
Specify a shipping origin and default location, weight and dimension units.
- Roles**
Configure user roles. Specify what roles can create orders and receive "Out of stock" notifications.
- Order Route**
Configure possible order statuses, status colors, transitions and email notification rules.
- Company Information and Settings**
Set merchant company name, address and logo. Configure invoices and packing slips.
- eCommerce Settings**
Define the shopping cart behavior and configure other eCommerce parameters.
- Set Order Numbering**
Set or update the start order number.
- Ratings & Reviews Settings**
Disallow duplicate reviews from a single visitor and configure other parameters.

This is how the settings page is looks like. There may be more options available depending on what modules you have installed. Lets look at the first setting page, Statistics and Dashboard.

System Configuration Tips

There are issues you need to pay attention to in order to configure the system properly.

- Shipping parameters are not configured. Please [click here](#) to open the Shipping Configuration page and set the shipping origin location and the weight and dimension units.

Settings » Statistics

Google Analytics Built-in Statistics Dashboard

Enable Google Analytics integration

Turning Google Analytics integration ON you allow the system to download reports from your Google Analytics account. If you disable this feature, the built-in statistics will be used.

Important! In order to track E-Commerce transaction you need to enable E-Commerce reporting in the Google Analytics website profile.

Save Cancel

The first tab is Google Analytics Integration. We recommend you setup a Google Analytics account for your Lemonstand store because it provides a more indepth reporting than Lemonstand's built in statistics.

To configure Google Analytics please follow this documentation:
http://lemonstand.com/docs/configuring_the_google_analytics_integration/

The screenshot shows the LemonStand System - Statistics page. At the top left is the LemonStand logo. The main header is "System - Statistics". Below the header is a navigation bar with "System", "Settings", "Users", "Backup or Restore", and "Modules & Updates". The "Settings" tab is active. Below the navigation bar is a "System Configuration Tips" section with a warning about shipping parameters. The main content area has a breadcrumb "Settings > Statistics" and three tabs: "Google Analytics", "Built-in Statistics", and "Dashboard". The "Built-in Statistics" tab is selected. It contains a toggle switch labeled "Enable built-in statistics" which is currently set to "OFF". Below the toggle is a text box explaining that turning off the statistics prevents LemonStand from storing traffic information in the database. At the bottom of the tab are "Save" and "Cancel" buttons.

The built-in statistics will keep track of the traffic information and store the pageviews per ip address in the database. The IP filters allow you to filter out your own IP address so as to not skew the pageviews with your own while developing.

The screenshot shows the LemonStand System - Statistics page. At the top left is the LemonStand logo. The main header is "System - Statistics". Below the header is a navigation bar with "System", "Settings", "Users", "Backup or Restore", and "Modules & Updates". The "Settings" tab is active. Below the navigation bar is a "System Configuration Tips" section with a warning about shipping parameters. The main content area has a breadcrumb "Settings > Statistics" and three tabs: "Google Analytics", "Built-in Statistics", and "Dashboard". The "Dashboard" tab is selected. It contains two checkboxes: "Display only paid orders in the main chart" and "Display a current date in reports and charts". Below each checkbox is a text box explaining its function. At the bottom of the tab are "Save" and "Cancel" buttons.

Under the dashboard tab you can specify if you want only paid orders to show up and whether you want the current date to be included in reports and charts.

Google Analytics only reports statistics after 24hrs so if you include the current date in reports it may be inaccurate.

CMS Settings

The screenshot shows the 'System - CMS Settings' page in the LemonStand interface. The navigation menu includes 'System', 'Settings', 'Users', 'Backup or Restore', and 'Modules & Updates'. The 'Settings' section is active, and the 'Template Engine' tab is selected. A toggle switch for 'Enable file-based templates' is currently set to 'OFF'. The description states: 'Enable file-based templates if you want LemonStand to store pages, partials and templates in files instead of the database.' There are 'Save' and 'Cancel' buttons at the bottom.

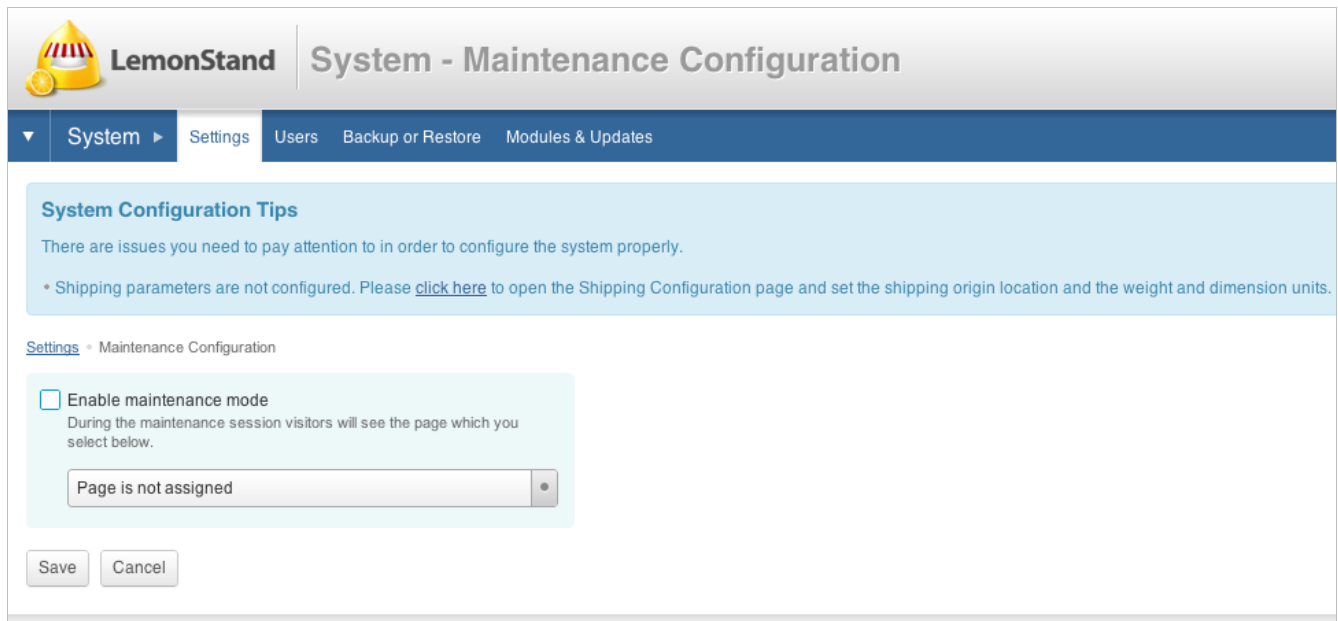

The template engine allows you to save the CMS pages as individual files instead of to the database. This is useful if you want to use an external file editor to manage and edit your CMS pages and partials.

For help setting up file-based templates refer to this documentation:
http://lemonstand.com/docs/using_file_based_templates/

The screenshot shows the 'System - CMS Settings' page in the LemonStand interface. The navigation menu includes 'System', 'Settings', 'Users', 'Backup or Restore', and 'Modules & Updates'. The 'Settings' section is active, and the 'Resources directory' tab is selected. The section is titled 'Path to the website resources directory *'. The instruction reads: 'Please specify path to the website resources directory relative to your LemonStand installation root. The directory should exist and be writable for PHP.' A text input field contains the value 'resources'. There are 'Save' and 'Cancel' buttons at the bottom.

In the resource directory tab you can manage where you would like the external resources for your project like css, javascript and image files are stored.

Maintenance Configuration

The screenshot shows the LemonStand System - Maintenance Configuration page. At the top left is the LemonStand logo. The main header is "System - Maintenance Configuration". Below the header is a navigation bar with "System", "Settings", "Users", "Backup or Restore", and "Modules & Updates". The "Settings" tab is active. Below the navigation bar is a "System Configuration Tips" section with a light blue background. It contains the text: "There are issues you need to pay attention to in order to configure the system properly." and a bullet point: "• Shipping parameters are not configured. Please [click here](#) to open the Shipping Configuration page and set the shipping origin location and the weight and dimension units." Below this is a breadcrumb trail: "Settings > Maintenance Configuration". The main content area has a light green background and contains a checkbox labeled "Enable maintenance mode". Below the checkbox is the text: "During the maintenance session visitors will see the page which you select below." Below this text is a dropdown menu with the text "Page is not assigned". At the bottom of the form are two buttons: "Save" and "Cancel".

While you are working on your LemonStand store, you can enable maintenance mode. This allows people who visit your site to see a splash page, which you can create to let them know that the site is under construction or maintenance. You can create your own page under CMS->pages.

When you are logged into the backend of your LemonStand store, this will bypass the maintenance page allowing you to freely work on your site.

▼ System ▸ Settings Users Backup or Restore Modules & Updates

Settings ▸ User Roles ▸ Edit Role

Role

Name *

Default

Description

Default general role.

Can create orders
If checked, users with this role will able to create new orders.

Out of stock notification
If checked, users with this role will be notified about products in out of stock state.

Save Cancel Delete

User roles are useful when you need to have different users responsible for specific order statuses. Such as having one user responsible for keeping track of orders being paid and one user responsible for getting paid orders shipped. An example is when an order has it's status changed to paid, you can set it up so that only the people responsible for shipping the product and changing the status from paid to shipped get notified.

http://lemonstand.com/docs/configuring_the_order_route_and_user_roles/

Order Route

Name	Transitions	Notify Customer	Notify Transition Recipients	Customer Message Template	System Message Template	API Code
New	Paid (Default)	No	No	shop:order_thankyou	shop:new_order_internal	new
Paid		No	No		shop:order_status_update_internal	paid

Order route helps you to distribute responsibilities between the store workers. The order route can be configured in a way that only users with specific roles can send an order from one status to another. LemonStand can send notifications to users who are responsible for sending an order to a next status in the order route. Also LemonStand can send notifications to a customer when an order gets to a specific status.

Name *

 Update Stock
Update stock values when an order enters this status.
Color *
Color for indicating the status in the order list.

Save Cancel Delete

When adding or editing an order route you can define it's name and color under the Order Status tab.

The screenshot shows the LemonStand 'Shop - Edit Status' interface. At the top left is the LemonStand logo, a yellow lemon with a red and white striped awning. The main header is 'Shop - Edit Status'. Below the header is a navigation bar with tabs: System, Settings, Users, Backup or Restore, and Modules & Updates. The 'Settings' tab is active, and the breadcrumb trail is 'Settings > Order Statuses and Transitions > Edit Status'. Underneath, there are three sub-tabs: Order Status, Transitions, and Notifications. The 'Transitions' tab is selected. The 'Transitions' section has a title 'Transitions' and a description: 'A list of order statuses an order can be transferred from this status and user roles responsible for transitions.' Below this is a list of transitions. One transition is shown with a green bar on the left: 'To status: Paid', 'Role: Default', and a 'Delete transition' link. At the bottom of the transition list is an 'Add transition' button with a plus icon. At the bottom of the page are three buttons: 'Save', 'Cancel', and 'Delete'.

In the Transitions tab you can define which user roles are responsible for handling the order when it becomes this particular status and to which status it can be changed to. In this example the Order Status is New and can be set to Paid by the Default user roles.

Notify Customer

Notify customer when orders enter this status.

Customer Message Template

Please select an email message template to send to customer. To manage email templates open [Email Templates](#) page.

shop:order_thankyou

Notify Transition Recipients

Notify users responsible for processing orders with this status when an order enters this status.

Notify User Roles

Alternatively you can select user roles which should receive a notification when orders enter this status.

Default

test

System Message Template

Please select an email message template to send to users. To manage email templates open [Email Templates](#) page. The notification is sent only if the Notify Transition Recipients option is enabled or a user role is selected in the Notify User Roles list above.

shop:order_note_internal

Save

Cancel

Delete

In the Notification tab you can choose whether to send an email to the customer and/or the transition recipients when an order becomes the status (in this case New).

You can also set which email templates you would like to use for the notification.

For the transition recipients you can alternatively specify which user role you would like to notify. This is useful when you want multiple roles to be allowed to change the order status but only a select number of user roles to actually receive an email notification.

Do not move any items to the postponed cart and use a maximum quantity for items matching in the customer cart and in the guest cart
- Override**
Delete all items from a customer cart and move all items from the guest cart to the customer cart
- Ignore**
Ignore items in the guest cart and do not modify the customer cart

Save Cancel

In the Cart Settings tab you can determine how you would like to handle the items already in a Guests cart if they decide to log in to their registered account.

Settings » eCommerce Settings

Display catalog/cart prices including tax
Enable this option if you want LemonStand to apply tax to product prices before displaying them in the catalog, cart and invoices.

Tax included label text

For example: Including GST

Tax inclusive label - country

Please select a country you want to display the tax included label for

Tax inclusive label - state

Please select a state you want to display the tax included label for

Save Cancel

The Tax tab is used for setting tax inclusive pricing in your store. For more info please read http://lemonstand.com/docs/configuring_lemonstand_for_tax_inclusive_environments/ http://lemonstand.com/docs/order_details_page_for_inclusive_tax_environments/ http://lemonstand.com/docs/payment_receipt_for_inclusive_tax_environments/

The screenshot shows the LemonStand System - eCommerce Settings interface. The top navigation bar includes 'System', 'Settings', 'Users', 'Backup or Restore', and 'Modules & Updates'. The 'Settings' section is expanded to show 'eCommerce Settings', with sub-tabs for 'Cart Settings', 'Tax', 'Product Search', 'Product Details Page', and 'Categories'. The 'Product Search' tab is active, displaying a configuration area with the following text: 'Here you can configure the product search feature. Please select the areas where the the search function should look.' Below this text are seven checkboxes: 'Product short descriptions' (checked), 'Product long descriptions' (checked), 'Categories' (checked), 'Manufacturers' (unchecked), 'Product META keywords' (unchecked), 'Product SKU' (unchecked), and 'Grouped products' (unchecked). A sub-note for 'Grouped products' states: 'When this feature is enabled grouped products are displayed as individual products in the search result.' Below these options are two buttons: 'Save' and 'Cancel'.

You can define where you would like the product search function to look for keywords.

The screenshot shows the LemonStand System - eCommerce Settings interface, specifically the 'Product Details Page' tab. The top navigation bar is identical to the previous screenshot. The 'Product Details Page' sub-tab is active, displaying a configuration area with the following text: 'Product details page behavior' and 'Please select a behavior the Product Details page should use to load a default product.' Below this text are two radio button options: 'First available grouped product (default)' (selected) and 'Specific product' (unselected). A sub-note for 'First available grouped product (default)' states: 'When a visitor opens the product details page, the page displays first available grouped product (if any).' A sub-note for 'Specific product' states: 'When a visitor opens the product details page, the page displays product specified in the page URL.' Below these options are two buttons: 'Save' and 'Cancel'.

The product details page allows you to choose whether a specific product should be used when going to a product page, or just show the first available grouped product.

The screenshot shows the LemonStand System - eCommerce Settings page. The top navigation bar includes 'System', 'Settings', 'Users', 'Backup or Restore', and 'Modules & Updates'. The 'Settings' section is active, and the 'Categories' tab is selected. The 'Enable category URL nesting' option is currently disabled (checkbox is unchecked). Below this option is a note: 'When the feature is enabled, you can use category URLs like "men/jumpers". Please note that this feature requires a minor update of the category pagination code, described in the [documentation](#).' There are 'Save' and 'Cancel' buttons at the bottom of the settings area.

The Categories tab has the option to enable nested categories. How Lemonstand's default functionality works with categories is that the URL is composed of the word category and then the category name.

eg. /category/men

With nested categories you can add more parameters to the URL such as

eg. /category/men/jumpers

Now going to /category/men could be one page, and /category/men/jumpers would be another page, instead of just /category/jumpers.

The other option once you enable category nesting is to automatically prepend the parent category URL. When creating categories you can specify the parent category, which can be used to have separate URLs for men and women clothing for example.
